

The diagram illustrates a cross-section of a pavement structure. It consists of two main layers: a top layer labeled "A" and a bottom layer labeled "B". Layer "A" is identified as "CONCRETE/ BITUMINOUS" and contains several circular and triangular symbols representing aggregates or inclusions. Layer "B" is identified as "GRANULAR SUBBASE" and is filled with a stippled pattern. Arrows indicate the direction of traffic flow: a downward arrow on the left side of the pavement and an upward arrow on the right side. The pavement surface is shown as a curved line on the left, sloping downwards towards the right.

	CONCRETE	BITUMINOUS
"A"	6"	3"
"B"	6"	6"
"C"	3'	3'
